

RD Certificate Number: EW531B

Aluthermo Roofreflex®

Description

This is an assessment of Aluthermo Roofreflex® which is a reflective breather membrane, insulating both thermally and acoustically. Hydrophobic but highly vapour permeable (H.P.V.), it is composed of a reflective geotextile, combined with an insulating 37 mm thick layer of stable, hydrophobic and self-extinguishing polyester fibre.

In comparison to the existing roof membranes guaranteeing only water tightness, Aluthermo Roofreflex® also reduces heat loss by combining reflective and low conduction insulation.

Scope of Registration

This product is not for use in flat roofs and should be used in conjunction with other insulation.

Validity

This system has been checked for compliance in accordance with English and Welsh Building Regulations.

Registration was first issued on 09/01/15 and is valid until 04/04/19 providing there are no amendments to applicable regulations.

Issue dated 03/03/2016
